Index cap: Places a limit on the maximum interest rate that can be credited to your contract. It is not guaranteed and may vary for each subsequent term.

Index term: The one-year or two-year period for which index performance is tracked and used to calculate earnings at the end of each term.

Participation rate: The proportion of the Index Change used in the calculation of the Index Account Performance for an Index Term.

Spread: An annualized percentage used as a deduction in the calculation of index earnings.

For contracts with a premium between \$25,000 and \$99,999

The initial rate is the higher of the rate on the date the application was signed or the contract issue date. Renewal rates are based on the contract issue date. Rate-locked contracts will be evaluated for renewal decisions based on the contract's initial rate-lock decision.

¹An Account Option is either a) the fixed account or b) the combination of an index + crediting option. (Example: S&P 500[®] Price Index with a two-year participation rate.)

²Amounts must be allocated to the Index Account for an entire Index Term to be credited any earnings. If any amount is withdrawn from an Index Account prior to the end of an Index Term, for any reason, the amount of earnings that may have been attributable to the amount withdrawn will be forfeited.

³Index may not be approved for sale in all states.

Guarantees and protections are subject to the claims-paying ability of Nationwide Life and Annuity Insurance Company. Rates are subject to change without notice; please verify them with your financial professional. Index options may vary by firm.

Surrender Charge

Should your needs change unexpectedly and you need to take an excess withdrawal that is above the free withdrawal amount in any given year, you are entitled to access additional monies, keeping in mind that certain penalties and charges may apply using the surrender charge schedule shown below.

Completed Contract Years	0	1	2	3	4	5	6	7	8	9	10
Surrender Charge	10%	10%	9%	8%	7%	6%	5%	4%	3%	2%	0%

Market value adjustment (MVA)

Any amount withdrawn in excess of the remaining free withdrawal amount is subject to a surrender charge and MVA, if applicable. The MVA is an adjustment that may be applied if you make a partial withdrawal or fully surrender your contract before the end of the surrender charge period. The MVA may be positive, negative or zero. If the MVA is negative, it could decrease the amount that you receive when you take a withdrawal or surrender. Conversely, if the MVA is positive, it could increase the amount you receive.

The actual return of the index account will be based on the performance of the underlying index or indices. Please note, the contract does not directly participate in any stock or equity investments; and withdrawals or surrenders prior to the expiration of an index period will result in no index participation for such amounts. It is important to understand that actual returns may be less than the return of the linked index due to the index cap. And, possibly even negative if you surrender all, or part, of the contract before the expiration of any applicable surrender period.

Nationwide Peak® 10 fixed indexed annuity is a single purchase payment, deferred, fixed indexed annuity contract issued by Nationwide Life and Annuity Insurance Company, Columbus, Ohio.

The Alliance Bernstein Growth and Value Index, BNP Paribas Global H-Factor Index, J.P. Morgan Cycle Index and the S&P 500 Daily Risk Control Index are excess return indexes. Indexes calculated on an excess return basis include calculation elements that reduce index performance. Because of this, an excess return version of an index will have lower performance than a total return version of the same index would, especially in high interest rate environments. Some excess return indexes also deduct a notional charge(s) in calculating index performance. This deduction(s) will reduce the potential positive change in index performance and increase the potential negative change in the index performance.
